SYNOPSIS

On June 22, 2016, US Environmental Protection Agency - Criminal Investigation Division (EPA-CID) Special Agent ███████████ (SA ████) visited the NY Waterway work dock at Port Imperial in Weehawken, NJ.

DETAILS

On June 22, 2016, US EPA-CID SA ████ visited the NY Waterway work dock at Port Imperial in Weehawken, NJ.

SA ████ observed multiple employees working on various NY Waterway boats upon ██ arrival at the scene at 7:45pm. ██ did not observe any discharge from any of the vessels into the Hudson River, nor did ██ observe any security cameras out on the work docks that would cover any of the suspected areas on the primary work docks.

From 9pm until 10pm, SA ████ was on the pedestrian walkway adjacent to the primary work docks and the smaller pier used by the boats leased to Goldman Sacks. ██ heard a noise that sounded like a pump coming from the primary work docks, this pump continued until SA ████ departed at 10pm.

SA ████ observed a flexible hose about 2.5 to 3 inches in diameter that was just on the outside of the guard rail along the pedestrian walkway. This hose was visually observed by SA ████ to go directly from the primary work dock to a PVC inlet near the Goldman Sacks pier. This inlet appeared to be a sewage access point, but would need to be verified. SA ████ felt the hose at the PVC inlet and the hose was not vibrating or pulsating at all.
